DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-29 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-31 of U.S. Patent No. 6,652,210 in view of Bellanca (5,108,244).

Both Yeaple (patent '210) and Yeaple (application '325) disclose binding a stack of pages to form a book comprising an electrically resistive strip, a stack of bound pages and an electric current to bind the binding edge of the stack.

However, Yeaple ('210) fails to disclose a flyleaf inside a book cover having a spine of the flyleaf affixed to the spine of the book cover.

Bellanca discloses that it is known to provide a book production process wherein a flyleaf is joined to front and rear covers of a book block and an end paper on the book cover inner spine (see column 1, lines 18-31). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to modify the book binding

Art Unit: 3722

process of Yeaple ('210) to include providing a flyleaf, as taught by Bellanca, to further reinforce the binding area of the book.

Regarding claims 10 and 23, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide any desired binding voltage and binding current, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F. 2d 272, 205 USPQ 215 (CCPA 1980).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references disclose binding methods.
